PROFESSIONAL SUMMARY

Full-Stack Engineer with 3+ years of professional experience building end-to-end systems with TypeScript, React, Node.js, and PostgreSQL — the exact core of this role's stack. I've designed and owned production internal tools from data model through UI: admin dashboards and operational platforms that real teams rely on daily, not demos. I translate ambiguous requirements into scalable systems independently, make pragmatic trade-offs between speed and maintainability, and take real ownership of reliability — debugging production issues, writing tests, and documenting the reasoning behind technical decisions as standard practice.

TECHNICAL SKILLS

Languages: TypeScript (strict, frontend + backend), JavaScript (ES6+)

Frontend: React, Next.js (App Router, SSR, SSG), performant and accessible UI

Backend: Node.js, Express.js, RESTful API design with clear contracts — NestJS (actively learning)

Database & Data Modeling: PostgreSQL (production), Prisma ORM (schema design, migrations, indexing, query optimization, transactions), MongoDB

Cloud & Deployment: Vercel, Render (cloud deployment — AWS-equivalent experience; AWS specifically currently strengthening)

Reliability & Observability: Sentry (error tracking), PostHog (analytics), rate limiting, production incident debugging

Testing & CI/CD: Vitest, Playwright (end-to-end), GitHub Actions

Working Style: Translating ambiguous requirements into scalable systems independently; pragmatic speed/maintainability trade-offs

AI-Native Workflow: Claude, GitHub Copilot, ChatGPT, Gemini — daily coding workflow, with full review and accountability for shipped AI-assisted code

EXPERIENCE

Full Stack Engineer (Freelance)

January 2022 – Present

Self-Employed · Nigeria (Remote)

- Designed and built end-to-end fullstack systems — backend services and APIs with clear contracts, and performant frontend interfaces — across every project shipped.
- Owned data modeling and database performance directly: PostgreSQL schema design, indexing, and query structure for systems with real transactional integrity requirements.
- Translated ambiguous, loosely-defined requirements into scalable systems independently, with no existing team or playbook to inherit.
- Built internal-tool-style platforms actively used by real operational staff — role-based access, real-time analytics, and data management, not demo software.
- Improved platform reliability and observability: rate limiting, structured error tracking (Sentry), and analytics (PostHog) integrated into production systems.
- Debugged and resolved real production issues methodically — tracing a hydration error to invalid nested HTML and a rate-limiter bug to a duplicate function call — improving operational resilience going forward.
- Made pragmatic trade-offs between speed, scalability, and maintainability under real project constraints — for example, choosing a lighter PDF-generation approach specifically to fit serverless deployment limits.
- Upheld engineering quality through automated testing (Vitest, Playwright) and CI/CD (GitHub Actions) as standard practice, not an afterthought.
- Delivered additional client and agency projects not listed here due to signed NDA agreements, but sanitized examples of that work are publicly viewable on my GitHub profile.

KEY PROJECTS

Smooth Ride Motorcycles – Admin Dashboard | Next.js · TypeScript · MongoDB · JWT **LIVE**

Production internal admin platform actively used daily by real staff — role-based access, real-time analytics, paginated data tables, barcode scanner integration, and CSV export.

↗ smooth-ride-motorcycles.vercel.app

Nexus Pay – Fintech SaaS Landing Page | React · TypeScript · Tailwind CSS v4 · Framer Motion **LIVE**

Animated fintech SaaS landing page — live dashboard mockup, bento-grid features, and accessible Radix UI primitives.

↗ [nexus-pay-eight.vercel.app](#)

LagoNest – Real Estate Platform | React · TypeScript · Tailwind CSS v4 · Framer Motion **LIVE**

Premium property platform for Lagos and Abuja — full-screen property search, filterable listing grids, and agent profiles.

↗ [lagonest.vercel.app](#)

Website Health Check — Performance & Site Auditor | Next.js · TypeScript · PostgreSQL · Prisma · Vitest · Playwright **LIVE**

Full-stack tool that audits any website and delivers a downloadable, branded score report — built and shipped solo, end-to-end, with rate limiting, error tracking, and analytics wired in from day one.

↗ [webbsite-health-check.vercel.app](#)

HMN Cooperative Society Platform | React · Node.js · PostgreSQL · Prisma · Paystack **WIP**

Full-stack financial management platform — real product, real users, contribution tracking, and loan workflows, with strict data-integrity requirements.

↗ [hmn-cooperative.vercel.app](#)

Additional freelance and agency client projects are not listed here due to signed NDA agreements, but sanitized examples of that work are publicly viewable on my GitHub profile.

CURRENTLY STRENGTHENING

- ▶ AWS — core managed services, building on existing Vercel/Render cloud deployment experience.
- ▶ NestJS — module/controller/service architecture, decorators, and dependency injection.
- ▶ Infrastructure as Code and CI/CD pipeline design beyond current GitHub Actions usage.
- ▶ Microservices and event-driven architecture patterns.

EDUCATION

B.Sc. Computer Science · University of the People	2026 – Present
ND, Computer Software Engineering · CIFMAN Institute of Technology & Management	2013–2015
Software Development Bootcamp · Digital Skill Up Africa	May–Jul 2025
Software Engineering Bootcamp · African Leadership University	May–Jun 2022

LANGUAGES

English — Fluent
